SPC (Stone Plastic Composite) Floor

- The plate is mainly formed by natural stone powder and resin and other mixed raw materials by heat deficiency of high precision equipment.
- The raw material is made of environmentally friendly formula, no adhesive is needed in the production process, and the installation of adhesive lock is free.
- A truly assured environmental floor.

Enjoy the beauty and quality brought by MS floor - Art+Quality

- The most popular household style, excellent product performance.
- To meet customer's demands for beautiful spaces and functions.

■ Matters needing attention in construction

1. Flatness of the ground: the height drop shall not exceed 3mm within 2m.
2. Reserve expansion joints: 5-8mm expansion joints must be beside the room wall.
3. Installation of strip: when the length of floor laying exceeds 12 meters, it is recommended to install strip.
4. Environmental adaptation: please place the floor in the room one day in advance before construction, and lay the floor after it adapts to the environment.
5. Laying plastic film: it is suggested to lay plastic film when laying composite real floor to increase comfortable foot feeling and noise reduction effect.

■ Construction storage and daily maintenance

Storage Requirements	1.The floor shall be stored under batch number in a dry, clean and ventilated warehouse with a temperature below 40°
	2.The distance from the heat source should be more than 1meter
	3.Stacking height should not exceed 2meters, please keep stacking in good order.
Transport	Floor transport process should not throw, impact, sun, rain
Cleaning and maintenance	1.Place floor mats at entrances and exits.
	2.Use a neutral detergent and a semi-dry mop to clean the dirt on the surface. (Dropping glue can be removed with 95% alcohol)
